```

related complex (I) comprising several polypeptides which contain an alpha subunit that contains substituted amino acids at specific positions. The polypeptides and host cells are useful for preparing (-)-(15,2R)-cis-napththalene dihydrodiol, (- or +)-cis-biphenyl-3,4-dihydrodiol, (15,2R)-cis-phenanthrene-1,2-dihydrodiol, cis-1,2-dihydrodiol, (15,2R)-cis-phenanthrene-1,2-dihydrodiol, cis-1,2-dihydrodiol,
Claim

9;

Page 126-127; 151pp; English

present invention

describes a naphthalene dioxygenase (NDO)

or NDO

```

The polypeptides and the host cells are also useful for preparing 1,2-dihydroxy-1,2-CC dihydroxy-1,2-CC dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydrophenanthrene which compound such as indene, 1,2-dihydrophenanthrene which they oxidise an are also used in bioremediation in which they oxidise an CC aromatic compound such as indene, 1,2-dihydronaphthalene, CC benzocyclohelpt-1-ene, anthracene, phenanthrene, dibenzo(1,4)dioxan, CC denaphthylene, naphthalene, biphenyl, fluorene, dibenzofuran, CC acenaphthylene, plo-dihydronanthracene, or 9,10-dihydrophenanthrene a CC corresponding dihydro dihydroxy compound. The polypeptides and the host CC cells are useful for preparing chiral diols for use in the polymer, CC resin, pharmaceutical or rubber industry. The present sequence represents a naphthalene dioxygenase (NDO) mutant alpha subunit, given in the CC exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

dihydroxyindan, 1,2'dihydroxy-1,2,3,4-tetrahydronaphthalene, which convolves contacting them with naphthalene, biphenyl, phenanthrene, involves contacting them with naphthalene respectively. The polypeptides and convolves contacting them with phenanthrene. The polypeptides and convolves contacting them with phenanthrene. The polypeptides and the lost cells are also used in bioremediation in which they oxidise an convolves contacting them with phenanthrene. The polypeptides and the lost cells are also used in bioremediation in which they oxidise an convolve contacting them with phenanthrene. The polypeptides and the lost cells are also used in bioremediation in which they oxidise an convolve compound such as indene, 1,2-dihydronaphthalene, benzocyclohelpt-1-ene, anthracene, phenanthrene, dibenzofuran, convolve corresponding dihydro dihydroanthracene, or 9,10-dihydrophenanthrene a corresponding dihydro dihydroxy compound. The polypeptides and the host colls are useful for preparing chiral diols for use in the polymer, cresin, pharmaceutical or rubber industry. The present sequence represents a naphthalene dioxygenase (NDO) mutant alpha subunit, given in the covve

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      QΥ
                      involves contacting them with phenanthrene. The polypeptides and the host cells are also used in bioremediation in which they oxidise an aromatic compound such as indene, 1,2-dihydronaphthalene, benzocyclohelpt-1-ene, anthracene, phenanthrene, dibenzo(1.4)dioxan, acenaphthylene, naphthalene, biphenyl, fluorene, dibenzofuran, dibenzothiophene, 9,10-dihydroanthracene, or 9,10-dihydrophenanthrene a corresponding dihydro dihydroxanthracene, or 9,10-dihydrophenanthrene a corresponding dihydro dihydroxy compound. The polypeptides and the host cells are useful for preparing chiral diols for use in the polymer, resin, pharmaceutical or rubber industry. The present sequence represent a naphthalene dioxygenase (NDO) mutant alpha subunit, given in the
                                                                                                                                                                                                                     involves contacting them with naphthalene, biphenyl, phenanthrene, indene, and 1,2-dihydronaphthalene respectively. The polypeptides and the host cells are also useful for preparing 1,2-dihydroxy-1,2-dihydroxy-1,3-dihydrophenanthrene which
                                                                                                                                                                                                                                                                                                                                                     related complex (I) comprising several polypeptides which contain an alpha subunit that contains substituted amino acids at specific positions. The polypeptides and host cells are useful for preparing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel naphthalene dioxygenase mutant having a specific amino acid substitution for preparing chiral diols for use in the polymer, repharmaceutical or rubber industry and for carrying out bioremediate
            exemplification of
                                                                                                                                                                                                                                                                                                 (-)-(15,2R)-cis-napththalene dihydrodiol, (- or +)-cis-biphenyl-3,4-dihydrodiol, (15,2R)-cis-phenanthrene-1,2-dihydrodiol, cis-1,2-dihydroxylndan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which
                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes a naphthalene dioxygenase (NDO) or NDO
                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 13; Page 104-105; 151pp; English

CC dihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydroxphthalene, which CC involves contacting them with naphthalene, biphenyl, phenanthrene, CC indene, and 1,2-dihydromaphthalene respectively. The polypeptides and CC indene, and 1,2-dihydromaphthalene respectively. The polypeptides and CC involves contacting them with phenanthrene. 1,2-dihydroxy-1,2-CC dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydrophenanthrene which CC involves contacting them with phenanthrene. The polypeptides and the CC host cells are also used in bioremediation in which they oxidise an CC aromatic compound such as indene, 1,2-dihydronaphthalene, CC benzocyclohelpt-1-ene, anthracene, phenanthrene, dibenzo(1,4)dioxan, CC accamaphthylene, naphthalene, biphenyl, fluorene, dibenzo(1,4)dioxan, CC dibenzothiophene, 9,10-dihydroanthracene, or 9,10-dihydrophenanthrene a corresponding dihydro dihydroxy compound. The polypeptides and the host CC cells are useful for preparing chiral diols for use in the polymer, CC resin, pharmaceutical or rubber industry. The present sequence represents an aphthalene dioxygenase (NDO) mutant alpha subunit, given in the CC exemplification of the present invention.
                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                         Query Match
                                                                                                                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (-)-(15,2R)-cis-napththalene dihydrodiol, (- or +)-cis-biphenyl-3,4-dihydrodiol, (15,2R)-cis-phenanthrene-1,2-dihydrodiol, cis-1,2-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          related complex (I) comprising several polypeptides which contains substituted amino acids at specific alpha subunit that contains substituted amino acids at specific positions. The polypeptides and host cells are useful for preparations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 13; Page 107-109; 151pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel naphthalene dioxygenase mutant having a specific amino acid substitution for preparing chiral diols for use in the polymer, resin pharmaceutical or rubber industry and for carrying out bioremediation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI; 2000-452174/39.
